### SUMMARY

Final-year Software Engineering student specializing in backend development and microservices architecture. Experienced in building RESTful APIs, scalable backend services, and database-driven applications using Java Spring Boot, SQL databases, and AWS. Seeking a Backend Developer Intern opportunity to develop secure, maintainable, and high-performance server-side solutions while improving practical experience in microservices, cloud deployment, and backend system design.

### TECHNICAL SKILLS

**Programming Languages** Java, JavaScript, TypeScript

**Backend** Spring Boot, Spring Cloud, Spring Security, Node.js, REST APIs, WebSocket (Socket.IO), JWT

**Databases & Caching** MySQL, PostgreSQL, MariaDB, MongoDB, Redis

**Infrastructure & Cloud** Microservices, Apache Kafka, Docker, Nginx, AWS EC2, AWS S3

**Frontend** React, React Native, Next.js, HTML5, CSS3, Tailwind CSS

**Tools** Git, GitHub Actions, Maven, Postman

### PROJECTS

#### TechShop | Microservices E-commerce Platform

Mar 2026 - Jun 2026

**Backend-focused Full-stack Developer** (Team size: 4)

**Tech Stack:** Java, Spring Boot, Spring Cloud, Spring Security, OAuth2, Kafka, Redis, JWT, MySQL, Docker, Nginx, AWS, CI/CD, ReactJS.

Description: Distributed e-commerce platform built with Spring Boot microservices and event-driven architecture.

- Developed backend services within an 11-microservice architecture, enabling **independent deployment** and **scalability**.
- Implemented an Auth Service using **Spring Security, JWT, OAuth2** (Google & Facebook), and **RBAC** to secure **20+ REST APIs**.
- Optimized API performance using **Redis caching** and Token Bucket rate limiting, validated with **Grafana k6** load testing.
- Implemented distributed transactions across Order, Inventory, and Payment services using **Apache Kafka, Transactional Outbox**, and **Saga pattern**.
- Automated CI/CD using **GitHub Actions**, containerized services with **Docker**, configured **Nginx** reverse proxy, and deployed to **AWS EC2**.

**GitHub:** <https://github.com/tcminh1405/TechShop-E-commerce-Platform>

#### Real-time Messaging & Communication Platform

Mar 2026 - Jun 2026

**Role:** Full-stack Developer (Team size: 4)

**Tech Stack:** Node.js, TypeScript, Socket.io, WebRTC, PostgreSQL, MongoDB, AWS, Docker, CI/CD, React Native, Tailwind CSS.

Description: Fullstack real-time messaging platform (similar to Zalo) supporting chat, calls, and social features.

- Developed a real-time messaging platform supporting 1:1, group chat, and real-time notifications using **Socket.io**.
- Implemented 1:1 audio/video calling with **WebRTC** and peer-to-peer communication for low-latency voice and video calls.
- Built real-time notification features for messages, friend requests, call events, and social interactions.
- Developed friend management features including add, accept, block, group management, and friend suggestions.
- Implemented real-time polling, enabling group members to create polls, cast votes, and receive live result updates.
- Containerized the system using **Docker** and configured **CI/CD** deployment to an **AWS** environment.

### EDUCATION

#### Industrial University of Ho Chi Minh City (IUH)

2022 – Present

Engineer's Degree in Software Engineering

Expected Graduation: Mar 2027

GPA: 3.0 / 4.0 (Current)

### LANGUAGE

English: TOEIC 600 (Listening & Reading)

Dec 2025
